STRETCHER PROVISION

A stretcher attachment system and interior protection for the cabin divan.

The subsequent installations of the ambulance interior is an easy field installation, typically in less than 0,5 hours.

The Stretcher attachment system is installed to attachment points on the divans structure. The attachment system works with stretchers equipped with LifePort's Latch foot. The foot has latching pins that locks in the Stretcher attachment system at two positions. The stretcher provision attachment can be supplied with other stretcher systems than LifePort, Inc. through a request to be certified and validated by BAM. Patient loading on the stretcher is made through the cargo door.

Patient loading route from cargo area.

GENERAL SPECIFICATIONS
